14.30. Хомотени ваљак масе  $m_1$  и полупречника  $R$ , које се котрља без клизања по хоризонталној равни. За средиште цилиндра зглобно је везан хомотени штап дужине  $2R$  и масе  $m_2$  на чијем другом крају делује сила  $F$  константног интензитета и хоризонталног правца, као што је приказано на слици. Пославити диференцијалне једначине кретања система.
